

Rainsticks

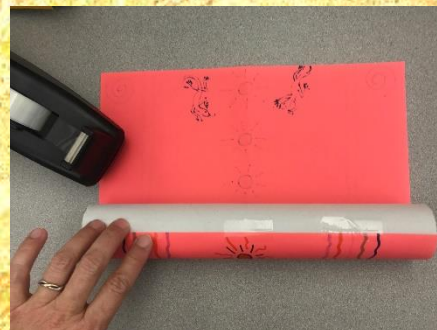

Supplies needed:

- *1 paper towel tube
- *16 in of Aluminum Foil
- *2 cupcake liners
- *small rain sound items (beads, beans, cut up straws, pebbles, rice)
- *1 sheet of letter size paper
- *cut paper shapes for decoration
- *markers, tape, glue

1. Decorate your piece of paper with your makers and cut out paper shapes.(use glue for the paper shapes)

2. Tape the decorated paper to the paper towel tube.

3. Next, take the foil and scrunch it up into a long snake. Then, form the foil snake into a coil or screw shape. If it is a little bit short pull both ends to make it even with the paper towel tube.

4. Put the coil into the tube. It should reach both ends. I used some tape to secure the end of the foil to the paper towel tube.

5. The next step is to tape a cupcake liner all the way around one end of the tube. After that, hold the tube vertical with the cupcake liner side down. Put the small rain sounds (beads, pebbles, etc.) into the tube. Cover that end with the cupcake liner and tape. It is important to tape all the way around the tube because it seals the rain sounds inside. Now tilt your rainstick.

Ahhhh! Rain
